

A NEW WAY TO LEARN ABOUT YOUR PRESCRIPTIONS

1. Find the QR code on prescription label and scan

- Every prescription bottle will have a QR code on the bottom left corner of the label.

2. Click on the link

- A link will show up once the QR code is scanned. Every QR code has its own specific link.

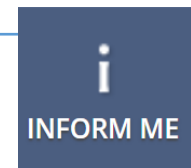

3. Navigate around to learn about your medication

- The video explains what the medication is commonly used for and possible side effects.

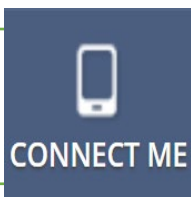

4. You can read instead of watching the video

- Prefer reading about your prescription instead? Click on 'Inform Me' and there is an option to read the monograph.

5. Questions or concerns

- Call the toll free number at (800) 332-1088 to report side effects to FDA or call your doctor for medical advice about side effects.
